SECTION 1: EXECUTIVE SUMMARY & CORPORATE MANDATE

1.1 Context and Genesis

NaijaTimely is a specialized software-as-a-service (SaaS) application engineered, owned, and deployed exclusively by **Fazet Edu Tech Ltd.** Born out of rigorous operational observations across major commercial urban landscapes including Abuja, Kano, and Lagos, the platform directly answers a critical economic reality: Nigerian service providers are highly entrepreneurial but severely limited by administrative overhead.

Micro, small, and medium-sized businesses routinely squander human capital performing basic scheduling duties. By capturing this administrative gap, NaijaTimely elevates the local service economy into a modernized digital standard.

1.2 The Core Mission

The informal and semi-formal service sectors in Nigeria represent a multi-billion Naira ecosystem. However, a significant percentage of potential revenue is lost daily due to inefficient, asynchronous communication tools. NaijaTimely provides an accessible, high-performance scheduling middle-layer that turns conversational traffic into structured, predictable digital appointments. Our objective is to formalize operational systems without introducing structural complexity.

1.3 Strategic Objectives

- **Eradicate Administrative Overhead:** Shift small businesses completely away from manual appointment tracking, notebook records, and chaotic text threads.
- **Protect Merchant Revenue:** Introduce automated verification systems that minimize client no-shows and unverified calendar holds.
- **Affordable Localization:** Deliver top-tier software infrastructure without the burden of recurring monthly subscription models, directly matching the unique financial realities of local business owners.

SECTION 2: THE WHATSAPP CHAOS MATRIX

2.1 The Friction of Manual Scheduling

While WhatsApp has established itself as Nigeria's most popular communication tool, using it as a primary booking ledger introduces severe operational challenges. When an enterprise relies entirely on manual text threads to schedule appointments, it faces three main operational vulnerabilities:

A. The Communication Bottleneck

A single booking usually requires a long, highly inefficient chain of messages. The customer queries availability; the business reviews its manual logs and proposes a slot; the customer checks their schedule and replies hours later. If the slot has been taken in the meantime, the cycle resets completely. This back-and-forth process wastes hours of productive time every single week.

B. Delayed After-Hours Responses

Data indicates that nearly half of consumers look for and try to book services late at night, specifically between 9:00 PM and 2:00 AM. When a business owner or assistant is asleep, these prospective leads sit unread. By the next morning, the consumer's intent has cooled down, or they have sought out a competitor utilizing automated, instant scheduling options.

C. Human Error and Overlapping Bookings

Manually recording appointments in paper notebooks or standard phone calendars frequently leads to double-bookings. Overlapping appointments cause immediate friction, frustrate high-value clients, lower team staff morale, and significantly damage the brand's long-term market reputation.

SECTION 3: THE 3-STEP FUNCTIONAL PIPELINE

NaijaTimely completely replaces conversational friction with a clean, automated 3-step operational pipeline designed to capture and process user intent instantly.

3.1 Step 1: Account Calibration

The setup process is strictly built for speed and can be fully completed in under two minutes. The merchant inputs their business name, lists their services with exact pricing matrixes, and outlines their operating hours. The backend instantly creates an optimized database profile designed to load smoothly on any modern device.

3.2 Step 2: Link Distribution

The system generates a clean, custom URL for the business (e.g., naijatimely.ng/yourbusiness). The merchant places this single asset across all digital profiles: Instagram bios, TikTok profiles, and WhatsApp Business automated greetings. This converts passive media consumption directly into an active digital storefront.

3.3 Step 3: Automated Bookings

When a customer clicks the link, they view real-time availability, select their required service, and input contact metrics. The system logs the appointment instantly and routes structured confirmation vectors straight to the merchant's WhatsApp, keeping the business organized without manual effort.

SECTION 4: FEATURE ARCHITECTURE & SYSTEM CAPABILITIES

4.1 Native WhatsApp Notification Delivery

NaijaTimely formats and routes instant booking details directly to the merchant's WhatsApp number. Instead of burying confirmations in cluttered email inboxes which micro-merchants rarely monitor, the platform ensures that scheduling data lands inside the exact application where the business operates daily.

4.2 Central Management Dashboard

The administrative portal provides an intuitive, high-performance visual overview of daily business operations:

- **Real-Time Schedule Tracking:** A live, operational timeline view of all confirmed, pending, and completed appointments for the workday.
- **Customer Records Management:** A built-in history tracking log capturing customer data, preferences, and long-term booking frequencies.
- **Performance Analytics Metrics:** Simple, visual tools that reveal your most profitable services and peak booking hours instantly.

4.3 Automated Reminders

Missed slots directly damage a service business's bottom line. NaijaTimely handles this problem by leveraging automated reminder triggers to keep clients aligned with their upcoming slots. This gentle push maximizes appointment attendance, ensuring staff calendars remain optimized and stable throughout the week.

SECTION 5: TEAM SCALABILITY & MULTI-STAFF PROVISIONING

5.1 Multi-User Configuration Options

NaijaTimely scales dynamically alongside growing teams. The platform easily handles configurations ranging from an individual sole operator up to a busy, multi-chair commercial center. It supports up to 20 distinct team members within a single corporate business profile.

STAFFING TIER	CAPACITY	TARGETED OPERATIONAL STRUCTURE
Solo Practice	1 Specialist	Independent operators, specialized private tutors, or mobile personal trainers.
Boutique Team	2–5 Specialists	Growing beauty studios, local barber shops, or boutique dental practices.
Commercial Hub	6–20 Specialists	High-volume multi-chair salons and established wellness centers.

5.2 Intelligent Availability Coordination

When a profile contains multiple staff accounts, the system shifts into a synchronized scheduling posture. Customers can select their preferred specialist or pick "Any Available Staff." The system cross-references individual team calendars in real time to secure maximum appointment coverage while completely eliminating internal double-booking friction.

SECTION 6: ECONOMIC ARCHITECTURE & PRICING LOGIC

6.1 Eliminating Subscription Fatigue

Most Western modern business software relies heavily on recurring monthly subscription models. For many Nigerian micro-enterprises, ongoing monthly fees—especially those subject to volatile foreign currency adjustments—introduce an unpredictable operating liability.

OPERATIONAL COST COMPARISON PARADIGM

Standard Subscription Model: *[Monthly Fee × 12 Months] → Continuous Overhead*

NaijaTimely Model: *[Single ₦20,000 Flat Fee] → Lifetime System Access*

6.2 Transparent Pricing Structure

NaijaTimely offers clear, straightforward pricing designed to respect the financial flow of local businesses:

- **Upfront Capital Cost:** A single, one-time activation payment of **₦20,000** per business profile.
- **Lifetime Access License:** Full ongoing access to the dashboard environment, booking engine, and notification tools without any ongoing hidden costs.
- **Zero Commission Charges:** Merchants retain exactly 100% of all revenues generated through their online booking links.

SECTION 7: DEPOSIT PROTECTION & RISK MITIGATION

7.1 Safeguarding Merchant Time

When a client skips an appointment without notice, the business loses both immediate revenue and empty operational time. To prevent these recurring losses, NaijaTimely integrates a flexible Deposit Protection Module designed to secure merchant schedules balance-first.

7.2 How Deposit Verification Works

1. **Setting Requirements:** The merchant can mandate a specific deposit requirement (either a flat fee or a percentage of the service value) before an online slot can be blocked out by a customer.
2. **Payment Vector Display:** The booking interface securely displays the merchant's verified bank transfer information directly to the client at checkout.
3. **Confirmation Upload:** The client executes the bank transfer using their preferred banking portal and uploads the generated receipt proof directly into the secure booking form.
4. **Merchant Approval Flow:** The calendar slot remains marked as pending protection until the merchant verifies the inward transaction inside their account and approves the slot, ensuring absolute financial safety.

SECTION 8: VERTICAL MARKET PENETRATION

NaijaTimely's core scheduling architecture is highly customizable, making it an ideal fit across eight primary service industries dominating the modern Nigerian urban market:

1. Barbershops

Reduces long weekend wait times, organizes customer lines, and assigns walk-ins smoothly to available chairs.

2. Hair Salons

Handles complex, multi-hour appointments (like braiding or coloring) and schedules necessary cleanup breaks between clients.

3. Nail Techs

Organizes precise time slots for detailed nail art, helping artists maximize appointments during slower mid-week days.

4. Makeup Artists

Secures busy weekend calendars during wedding seasons and event rushes using upfront deposit requirements.

5. Lash Artists

Protects the quiet, uninterrupted time needed for detailed lash extensions by handling bookings automatically.

6. Private Tutors

Enables students to book lessons easily while keeping academic calendars organized across different classes and subjects.

7. Fitness Trainers

Coordinates group fitness classes, manages gym floor capacities, and schedules 1-on-1 personal coaching sessions.

8. Spas & Wellness Centers

Coordinates staff availability, treatment rooms, and specialty equipment seamlessly to prevent double-bookings.

SECTION 9: CORE INFRASTRUCTURE STACK & VENDOR ARCHITECTURE

To guarantee enterprise-grade operational uptime, high load-speed profiles, and data sovereignty across Nigeria, NaijaTimely relies on a robust cloud topology optimized for lightweight mobile deployment.

9.1 The Infrastructure Stack Component Matrix

- **Frontend Edge Hosting (Vercel Edge Engine):** Client-facing online booking interfaces are hosted completely on Vercel's global distributed edge network. This ensures localized loading speeds under 1.5 seconds, even for clients using older smartphones or browsing on unstable local 3G networks.
- **Core Database Architecture (Supabase Engine):** All relational data, account credentials, and system calendars are secured within a high-performance Supabase environment. This setup integrates active row-level security protocols and real-time synchronization arrays.
- **Communication Notification Layer:** Custom API layers format appointment transitions instantly into data payloads, passing them securely through localized communication gateways to deliver instant information to the endpoint users.

By keeping this cloud layout clean, the core application avoids platform bloat, ensuring it remains incredibly responsive for business operators working in areas with low or spotty data coverage.

SECTION 10: MERCHANT CHANGE MANAGEMENT & ONBOARDING

Transitioning an established local customer base away from chaotic text conversations over to an automated scheduling link is straightforward when executed through our verified, three-phase operational rollout sequence.

10.1 Phase 1: Configuration (Day 1)

The merchant aligns their calendar backend parameters by entering exact business hours and uploading a complete service menu with fixed pricing scales. Merchants are highly encouraged to upload a sharp, high-resolution company profile icon to instantly build trust with visiting clients.

10.2 Phase 2: Launch and Integration (Day 2)

The new booking link is systematically added to Instagram, TikTok, and other corporate bio spaces. Crucially, the merchant must change their WhatsApp Business automated greetings to instantly route incoming text chats to the web application page: *"Thanks for reaching out! To view our available times and secure your spot instantly, please click our link: [Your Booking Link]"*.

10.3 Phase 3: Consistency (Day 3 and Beyond)

When clients text directly to ask about open slots, the merchant must gently redirect them back to the automated system. Over time, clients adapt to the immediate convenience of self-booking, freeing the merchant from manual coordination work.

SECTION 11: DEFINITIVE TERMS OF SERVICE (LEGAL)

Last Updated Framework: April 2026

1. Contractual Agreement Mandate

By establishing an active account, or interacting with the booking engine of NaijaTimely, you agree to be legally bound by these Terms of Service. If you do not accept these criteria, you must stop using the system immediately.

2. Free Trial Policies & Account Payment Architecture

Eligible enterprises receive a 14-day operational free trial to check feature compatibility. Continued dashboard utility past this time requires a one-time profile activation fee of exactly **₦20,000**. **All activation fees are strictly non-refundable under any circumstances.**

3. Scope of Service & Corporate Licensing

Each unique payment activation grants a restricted, non-transferable license valid for **one business entity operating out of a single physical location**. Multi-branch operations must purchase separate licenses for each active storefront location.

4. Liability and Deposit Tracking Disclaimer

NaijaTimely provides internal database fields to help track incoming client scheduling deposits; however, **the platform does not touch, hold, or process payments directly**. The merchant is solely responsible for verifying bank alerts, managing their finances, and handling any client refunds directly.

SECTION 12: DATA GOVERNANCE & PRIVACY POLICY

Last Updated Framework: April 2026

1. Types of Data Collected

We restrict data collection to the absolute bare minimum necessary to provide clean scheduling services:

- **Merchant Metrics:** Corporate name, active phone contacts, operational hours, and listed service offerings.
- **Client Metrics:** Full names, mobile phone numbers, and historic appointment details.

2. Strategic Data Utilization

We process internal records solely to host your custom web address, handle automated booking alerts, and optimize system speed. **NaijaTimely never sells, rents, or leases merchant databases or customer records to third-party ad networks.**

3. Data Security and Infrastructure Controls

All database instances are stored securely within encrypted cloud databases managed by **Supabase**. Technical access is strictly limited to authorized engineers to protect customer privacy.

4. Managing Your Data Rights

Merchants and clients retain full rights to request an exported copy of their personal data or ask for its permanent deletion from our databases. All data removal requests will be processed and completely fulfilled within **7 business days**.

SECTION 13: CORPORATE DIRECTORY & CONTACT PROTOCOL

13.1 Corporate Profile

NaijaTimely is developed, maintained, and operated under the corporate oversight of **Fazet Edu Tech Ltd.** We design high-performance software systems built to simplify workflows, eliminate operational friction, and support digital business growth across modern African markets.

13.2 Contact Directory & Escalation Matrix

For technical inquiries, dashboard setup help, or enterprise support requests, please contact our support desk through our official channels:

SUPPORT CHANNEL	OFFICIAL CONTACT VECTOR
Direct WhatsApp Support	+234 708 292 1105
Official Support Desk Email	support@naijaimely.ng
Corporate Offices	Abuja Corporate Hub Kano Dev Base Lagos Center

CRITICAL SYSTEM ESCALATION NOTICE

For rapid emergency response regarding active live-link performance or access issues, please use the Direct WhatsApp Support channel. Standard response times are monitored closely and average under 15 minutes during standard operational hours (8:00 AM - 6:00 PM WAT).
